

Curriculum vitae ARESE MARCO

March 7th, 2023

Personal details

Born in: Pinerolo-TO-Italy

Nationality: Italian

Email: marco.arese@unito.it

Website: <https://medchirurgiasl.campusnet.unito.it/do/docenti.pl/Alias?marco.arese#tab-profilo>

ORCID ID: 0000-0002-7384-9406 ; Scopus ID: 7004105670 Researcher ID: J-6119-2013

Educations

Oct 1996	Jul 1999	Specialization School in Clinical Biochemistry	Università degli Studi di Torino
Oct 1988	Jul 1992	MSc in Biology	Università degli Studi di Torino

Professional experiences and current position

Mar 2005	March 2023	ASSOCIATE PROFESSOR	Università degli Studi di Torino
Feb 2000	Mar 2005	ASSISTANT PROFESSOR	Università degli Studi di Torino
Dec 1996	Feb 2000	Research Scientist	New York University Medical Center
Sep 1992	Nov 1996	RESEARCH FELLOW	Università degli Studi di Torino

Teaching activity:

- ADE - INTRODUCTION TO MEDICAL BIOCHEMISTRY (SCB0309)
MedInTO Medicine and Surgery
- Basi biochimico-molecolari del metabolismo (MSL0410)
Laurea magistrale in Medicina e Chirurgia San Luigi Gonzaga
- Biochemical and Molecular Basis of Metabolism (SCB0314)
MedInTO Medicine and Surgery
- Biochemical and Molecular Basis of Metabolism - Module of Biochemistry (SCB0314C)
MedInTO Medicine and Surgery
- Biochimica (MSL0426G)
Laurea magistrale in Medicina e Chirurgia San Luigi Gonzaga
- Exploiting neuronal biology to fight tumor progression. Instructor prof Marco Arese
Programma MD-PhD della Scuola di Medicina
- Preparatory biochemistry (SCB0313)
MedInTO Medicine and Surgery
- Scienze psichiatriche (SCB0063)
Laurea magistrale in Medicina e Chirurgia San Luigi Gonzaga

Research main topics

- I dedicated my early scientific work to various mediators involved in vascular biology. During my experience abroad (New York) I worked on the cellular transforming role of intranuclear forms of FGF-2.
- Upon returning to Italy I devoted myself to the study of the extra-neuronal functions of two synaptic proteins, Neurexin and Neuroligin, originally isolated from the synapses of the central nervous system. I provided the first evidence that these proteins are expressed by endothelial and smooth muscle cells and modulate physiological angiogenesis
- In the last ten years I studied the role of Neuroligin as a tumor-produced protein and its role in the progression of Colorectal cancer (CRC). When discovered at the metastatic stage, CRC is still incurable. Despite recent improvements in precision treatment for this disease, new molecular targets and prognostic/predictive indicators are highly needed. At the synapse, Neuroligin interacts with the tumor suppressor adenomatous polyposis Coli (APC), which in turn is highly involved in the development of CRC and is a major player in the WNT/beta-catenin pathway. Neuroligin is expressed in human CRC, including clusters of aggressive migratory (budding) single tumor cells and vascular emboli. Moreover Neuroligin induces cancer cells intra/extravasation and in vivo metastatization. Our goal now is to investigate the mechanistic involvement of Neuroligin in the WNT pathway and in the

promotion of CRC cell metastatization, as well as its synergy/antagonism with anti-WNT drugs, in the hope to obtain future therapeutic leads.

Bibliometry (1992-present)

h index: 24 (www.scopus.com)

10 best publications

- 1) Pergolizzi M, Bizzozero L, Maione F, Maldi E, Isella C, Macagno M, Mariella E, Bardelli A, Medico E, Marchiò C, Serini G, Di Nicolantonio F, Bussolino F, Arese M. The neuronal protein Neuroligin 1 promotes colorectal cancer progression by modulating the APC/β-catenin pathway. *J Exp Clin Cancer Res.* 2022 Sep 2;41(1):266. doi: 10.1186/s13046-022-02465-4. PMID: 36056393; PMCID: PMC9438340.
- 2) Bizzozero L, Pergolizzi M, Pascal D, Maldi E, Villari G, Erriquez J, Volante M, Serini G, Marchiò C, Bussolino F, Arese M. Tumoral Neuroligin 1 Promotes Cancer-Nerve Interactions and Synergizes with the Glial Cell Line-Derived Neurotrophic Factor. *Cells.* 2022 Jan 14;11(2):280. doi: 10.3390/cells11020280.
